

# ADERCO QUALITY POLICY

Aderco International offers innovative solutions using state of the art technologies capable of solving fuel-related issues, energy efficiency and engine operational reliability, for both the maritime and inland sector environments.

To guarantee the quality of its services, Aderco International took the decision to implement a quality management system that meets the requirements laid down by the ISO 9001:2015 standard.

The implementation of the quality system has been designed to achieve the following objectives:

- **Improvement of products and activities**

By taking into account improvement proposals, analyzing the root cause of issues faced within the industries, as well as advancing our research and development activities.

- **Sustainable development**

By applying a quality policy, based on a model of development, which integrates both ecological and social constraints into the economy on a long-term basis.

- **Developing the skills and expertise of our Employees**

By offering continuous information and educational opportunities to improve our expertise on fuel-related issues.

- **Compliance with regulatory and legal requirements**

By fully ensuring our social, legal, regulatory and environmental commitments are upheld.

- **Customer satisfaction**

By providing high-quality products and services, tailored to meet our customer needs and expectations.

Aderco International is committed to being a caring and responsible company, especially with regard to risk prevention, operational efficiency and environmental protection.
